Comments
(Set forth by above question #, if applicable.
Use "Additional Comments" Sheet, if needed

95-284992 File #:

#I: With microscopic hair comparison, even with the best notes, there is no way to determine the comparison

was performed correctly.

#2: The examination results set forth in the laboratory report are supported by the bench notes, but the documentation is marginally adequate. The notes are not dated or initialed and are in pencil.

#5: Malone testified that, based on literature and his own personal experience, if he matched a hair to a person

the chance of finding another individual with the same hair is about one in five thousand. The published

(Time).

literature Malone refers to has been the subject of much debate. The conclusions reached in this literature has not

been duplicated, so using it to arrive at the one in five thousand chance is misleading. Malone's experience, as

Additional Comments (Set forth by question #, if applicable)		
File	#:	
#5 (c	continued): this reviewer has learned from reading numerous transcripts of his testimony, is that he claims to	
have	examined hair from over ten thousand people and only 2-3 times has found the hair to be the same. This	
expe	rience of his is not the same as comparing the hair from all 10,000 people to each other. Malone's one in	
five	housand estimate, based upon his experience, is misleading and not supported by the forensic community	
(see	US v Massey, 594 F.2d 676)
